EXECUTIVE SUMMARY

Computer Science undergraduate with **Strong Python fundamentals** and familiarity with backend frameworks like **Flask**. Possesses a deep interest in **AI/ML**, having built applications integrating **LLMs** and RAG pipelines. Proven **willingness to learn and adapt quickly**, demonstrating the ability to **take ownership** of product development.

PROJECTS

AI Job Matcher with RAG | *Python, Flask, FAISS, LLMs*

Jan 2026

- Demonstrated **Strong Python fundamentals** by engineering an end-to-end backend system that parses resumes and matches them to jobs.
- Built with **AI/ML** focus, integrating **LLMs** (Google Gemini 2.0) and RAG pipelines to provide intelligent insights.
- Took **ownership of the product** lifecycle, from designing vector database schemas (FAISS) to deploying the application.
- Implemented **APIs** and backend logic using Flask.

Sports Scheduler Web Application | *Node.js, Express.js, Firebase*

Aug 2025 – Sep 2025

- Built a **role-based web application** with Admin and Player access using Firebase Authentication.
- Developed RESTful APIs in **Node.js** and **Express.js** to create, join, and manage sports sessions.
- Used **Firestore** for real-time session and participant management with rule enforcement.

Weather Info Web Application | *Node.js, Express, REST APIs*

Jun 2025 – Jul 2025

- Developed a backend-heavy application showcasing a solid **basic understanding of databases and APIs**.
- Implemented secure authentication and real-time data fetching, proving the ability to **adapt quickly** to new requirements.
- Managed API endpoints and response structures, ensuring high reliability and performance.

E-Commerce Website | *HTML, CSS, JavaScript*

Jun 2025 – Jul 2025

- Built a responsive platform, demonstrating the ability to **learn as you go** and deliver a functional product.
- Structured the codebase for scalability, reflecting a professional approach to software development.

Telegram Chatbot with Database Integration | *Node.js, MySQL*

Mar 2024 – Apr 2024

- Automated user interactions using backend logic, reinforcing **database** management skills with MySQL.
- Showed confidence in building independent tools and handling real-time user commands.

TECHNICAL SKILLS

Core Languages: Python, SQL, Java, JavaScript, C

Backend & Frameworks: FastAPI (Familiarity), Flask, Node.js, REST APIs

AI/ML & LLMs: LLM Integration, Google Gemini API, RAG, PyTorch, TensorFlow, Scikit-learn

Databases: MySQL, MongoDB, FAISS (Vector Database) – **Basic understanding of databases**

Soft Skills: Willingness to learn, Take ownership, Rapid Adaptation

EDUCATION

Vishnu Institute of Technology

Bhimavaram, AP

B.Tech in Computer Science and Engineering; CGPA: 8.35/10.0

Sep 2023 – Apr 2027

- **Relevant Coursework:** Data Structures & Algorithms (Python), Machine Learning, DBMS, OS, Computer Networks.

ACHIEVEMENTS & CERTIFICATIONS

- Computer Science 101 (Stanford)
- MongoDB Developer's Toolkit
- Participated in EnCode 2025, Udgam 2025 (IIT Guwahati), Flipkart GRID 6.0
